

St. Andrews Scot School

Adjacent Navniti Apartment , Patparganj, Delhi-110092

Session: 2025-2026

Class: III

Subject: Science

Lesson -10 Weather, Air and Water

- Reading of the chapter
- Explanation (will be done in class)

(Textbook Exercises)

A. Tick the correct answer

- 1)(b) quickly
- 2)(c) storm
- 3)(b) water vapour
- 4) (c) three
- 5) (c) condensation

B. Fill in the blanks.

- 1) Humidity
- 2) Noon
- 3) Oxygen
- 4) Breeze

D.Name these.

- 1)Winter
- 2) Carbon dioxide
- 3) Storm
- 4) Water cycle

Learn define from page no. 81

Notebook Work

New Words

- 1) Weather
- 2) Slanting
- 3) Breeze
- 4) Water vapour
- 5) Humidity
- 6) Drought
- 7) Flood
- 8) Evaporation
- 9) Condensation
- 10) Conversion

Short Question /Answers

1.Name the factors that affect weather.

Ans. The factors that affect weather are sun, wind, rain and clouds.

2..What is the difference between breeze and storm?

Ans. Breeze is gently blowing wind while storm is strong winds along with thunder and rain.

3.Why are the mornings and evenings not too hot?

Ans. Mornings and evenings are not too hot because the sun rays are slanting in morning and evening.

4.Define the following terms:

a) Evaporation – The conversion of water into water vapour.

b) Condensation -The conversion of water vapour into water droplets.

5. What does air contain?

Ans. Air contains gases like oxygen, nitrogen and carbon dioxide.It also contains water vapour and dirt.

Long Question/Answers

1.Differentiate between weather and season.

Ans.

Weather	Season
(i) The condition of air at a particular place at a given time is called weather.	(i) The period in a year during which the weather remains more or less same for many days is called season.
(ii) It changes quickly.	(ii) It remains same for many <i>days</i> .

2.What is humidity? How does it affect the weather?

Ans. The amount of water vapour present in the air is called humidity. It makes the weather humid ,due to which people sweat more.

3.Explain water cycle.

Ans. The cycle of change of water into different forms continuously is called the water cycle .

4.How does the sun help wind to blow.

Ans. The sun heats up the land and the warm air being light rises up. To fill the space cool air rushes in to take its place. In this way ,wind blows. Diagram

Activity

'Water is essential for all living organisms. We should not waste water. Rather we should make efforts to conserve it. Make a poster showing Conservation of water in your science notebook.
